

$$\mathcal{L}((a \cup ba)^* bb) =$$

$$\{a, ba\}^* \{bb\}$$

$$= \{e, a, ba, aa, aba, baba, baa, aqa, \dots\}$$

$$\cdot \{bb\}$$

$$= \{bb, abb, babb, aabb, ababb, baabb,$$

$$bababb, qaabb, \dots\}$$

Sheep Language

$L = \{ba, baa, baaa, \dots\}$ $\Sigma = \{a, b\}$

In Turkish: $\{me, mee, meee, \dots\}$:)

Regular Expression for L : ba^*X
wrong $(ba)^*X$
Correct: baa^* ✓
 ba^+

DFA for L :

start state: q_0

final state: q_2

q_3 is trap state

2.b)

$$((bb)^* \cup (ab)^*)^* (aa) ((ba) \cup (bb))^*$$

L: Even length strings that contain aa only once.

bbabaa

aabbab
babbaa

} cannot be generated.
they are in L.

Correction:

Try:

$$((ab) \cup (ba)^* (bb))^* (aa) ((ba) \cup (bb) (ab)^*)^* \cup baab$$

But cannot generate ahaaba

Try:

$$((ab)^* \cup (bb)^*)^* baab ((ba)^* \cup (bb)^*)^*$$

Is it correct? Still No!

$$\Sigma = \{a\}$$

Language

DFA

\emptyset

Any DFA with $F = \emptyset$
or with unreachable final states

$$L = \{e\}$$

$e \in L$ iff $s \in F$ (for DFA)

$$L = \{a\}$$

$$L = \{a\}^*$$

$$\Sigma = \{a, b\}$$

DFA

$$L = \{a\}$$

$$L = \{a\}^*$$

$$L = \{a, b\}^*$$

$$\Sigma = \{a, b\}$$

$$L = \{a\}$$

NFA

$$L = \{a\}^*$$

transitions
for inp: symbol
b: not defined

NFA examples:

M:

$$a \in L(M)$$

$$a \in L(M)$$

$$a \in L(M)$$

(Note that $s \notin F$)

$$e \in L(M)$$

$$a \in L(M)$$

$$\Sigma = \{a, b, c\}$$

$L = \{w \in \Sigma^* \mid \text{Exactly 1 alphabet symbol is missing in } w\}$

ex:

$abb \in L$

$bbc \in L$

$ac \in L$

$abc \notin L$

NFA for L :

$(q_0, ab) \vdash_M (q_1, \underline{ab}) \vdash_M (q_1, b) \vdash_M (\underline{q_1}, e)$ accepted

or
 $\vdash_M (q_2, \underline{ab}) \vdash_M \text{no next configuration}$

or
 $\vdash_M (q_3, ab) \vdash_M (q_3, b) \vdash \text{no next configuration}$

M

M'

NFA to DFA construction:

Eliminate sources of nondeterminism:

1. Eliminate empty transitions

2. Add missing transitions
(undefined)

3.

From q_0 by consuming a next state can be q_1, q_2, q_3, q_4, q_5 Subset Construction $K' = 2^K$
